

ECB Injury Surveillance 2022

For several years County and International teams have been involved with the ECB injury surveillance programme, with the aim of understanding injury risk at each level, so it can be effectively monitored and reduced. We are now pleased to extend this across the recreational game, with 'Injury Reporting' in Play-Cricket.com.

The injury data inputted into Play-Cricket.com will be actively monitored, analysed and reported upon each year, forming part of the ECB's annual 'Injury Surveillance Cycle'. The insight produced will enhance our understanding on the risk of cricket participation at all levels, which will inform initiatives to help manage and reduce this risk, improving the overall health and safety of the game, for all involved.

We piloted the programme in 2021 with a handful of users which confirmed the platform was ready to use and also gave us a flavour of the types and frequency of injuries seen across the recreational game.

2021 Findings

The data provided was a snapshot from an opportunistic sample, the outcomes of which may not be representative of the wider recreational game.

A total of 128 injuries (74 time loss, 45 non-time loss and 9 unknown) were recorded by 72 different club volunteers across the country from April 10th to September 5th 2021. Of those injured, 124 were male and 4 female, with 76% of injuries occurring to over 18's.

Of the 128 injuries, 75 were treated with First aid (both on or off field), 49 resulted in a visit to Accident & Emergency or GP with 4 hospital admissions.

The majority of injuries were caused by 'being struck by a moving object' ($n = 50$), followed by injuries classified as 'Other' ($n = 31$) and 'Slip, trip or fall' ($n = 25$).

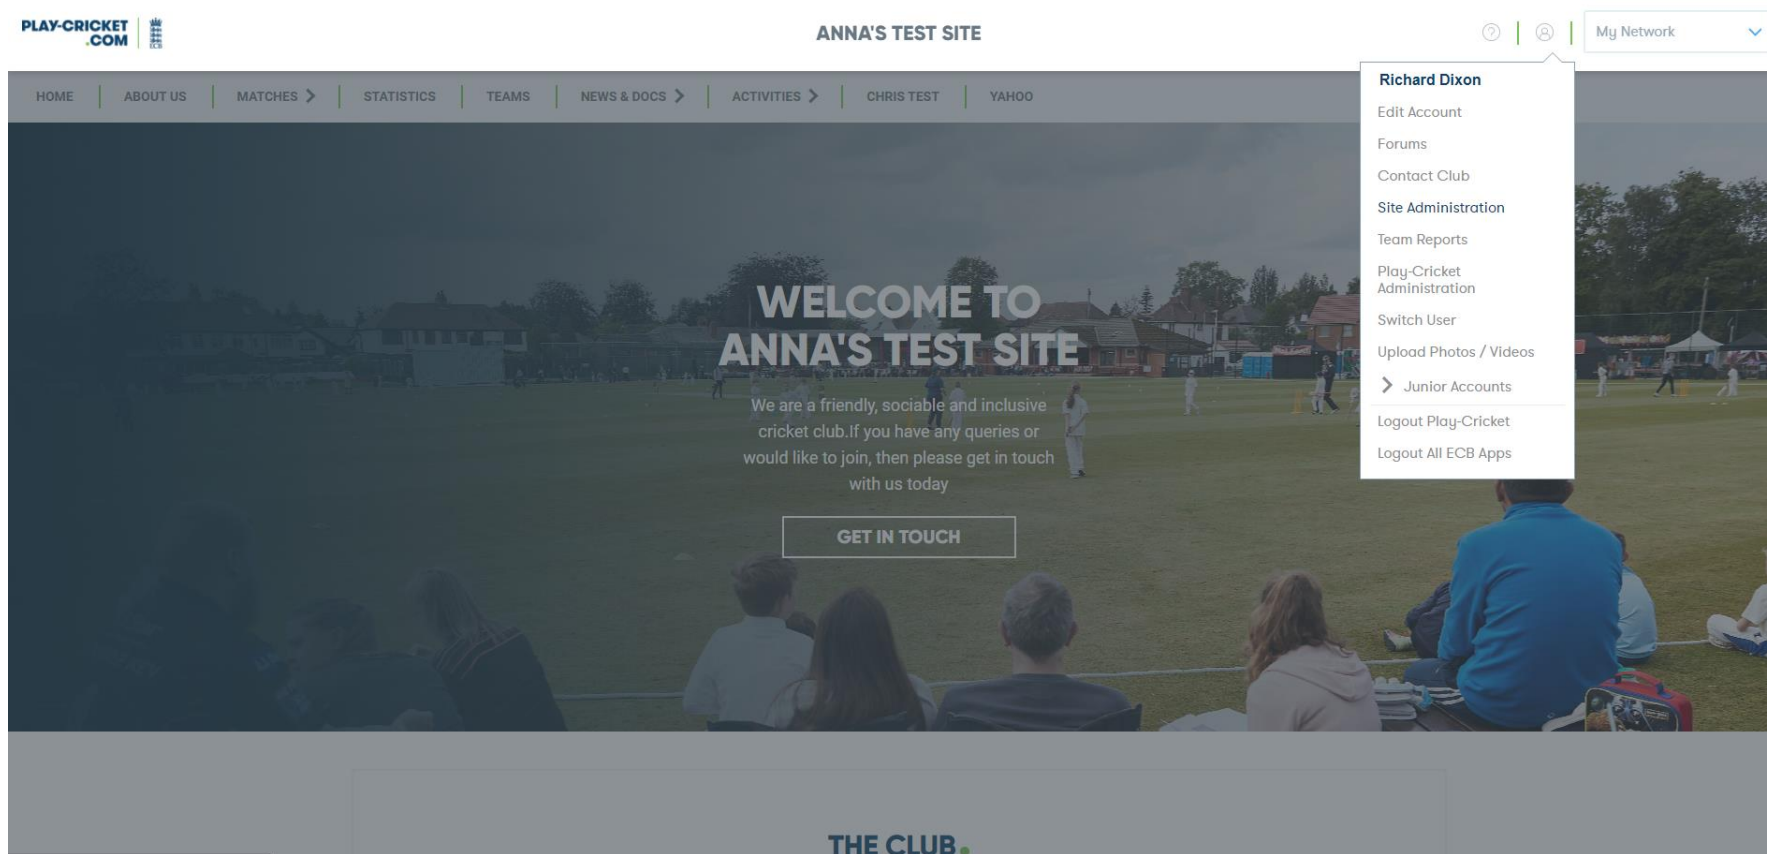

From a total of 25 different injury types recorded, 'Sprain/Musculo Skeletal' was the most frequently occurring injury type ($n = 26$), closely followed by fracture ($n = 24$).

The majority of injuries were sustained to the fingers ($n = 18$), followed by the head (not eyes; $n = 16$), knee ($n = 15$), hand ($n = 11$) and ankle ($n = 9$).

This short step-by-step guide outlines how you can complete an injury record on Play-Cricket.com. An injury record should be completed for any incident that occurs at your club, which requires medical attention.

Completing an Injury Record

1. Adding an injury record is done on Play-Cricket.com by one of the club administrators. Once they have logged in, they should go to the menu in the top right-hand corner of the screen (head icon) and select “Site Administration”.

2. The next step is to click on the “Day to Day” heading on the left hand menu and then select “Injury Reporting” under the “Members” heading

The screenshot shows the Play-Cricket Admin interface. At the top left is the 'PLAY-CRICKET.COM' logo. The main header area contains 'ANNA'S TEST SITE' and a 'My Network' dropdown menu. A secondary header bar includes 'VISIT HELP DESK' and 'EXIT ADMIN' links. On the left, a vertical navigation menu is visible with icons for 'Action Centre', 'Dashboard', 'Day To Day', 'Website Content', 'Setup', 'Reports', 'Uploads', and 'Email Log'. The 'Day To Day' menu is expanded, showing sub-sections: 'Fixtures', 'Results', 'Members', 'League', and 'Find a'. Under the 'Members' section, 'Injury Reporting' is highlighted. The main content area is titled 'ACTION CENTRE' and features a table of actions. A notification badge for 'ADMIN NOTICES' with the number '27' is present in the top right of the main content area.

ACTION DESCRIPTION	NUMBER	VIEW
Breach of Player Suspension	4	View
Breach of Player Suspension	2	View
Breach of Player Suspension	1	View

INJURED BODY PART

5. Once an incident has been recorded you can go back and edit it. This allows for the record to be updated with additional information, which may have been available at the time, such as the length of time someone was subsequently absent from the game.
6. For any queries, click on the “Visit Help Desk” tab in the top right hand corner of the screen.
